

# >> Nursing/Reception Stations

The nursing station is the central hub of nursing care activities of Intensive Care Units and Wards in a hospital. It includes a reception area along with record storage, vital monitoring data, portable medical equipment with routine testing apparatus for all patient care related activities. As the reception station is the first point of human touch with the patients / visitor it must be welcoming to boost their confidence. Hence it is imperative to make this area accessible and seamless. This allows the caregiver to perform all important nursing / reception activities smoothly.
